

Cannabis.

Nature's miracle.

Think of the ECS as a lock-and-key system inside your body. The lock (internal receptor) is always present, waiting to be unlocked. The two "keys" that can activate the receptor are endocannabinoids and phytocannabinoids.

Phytocannabinoids,  
Endocannabinoids

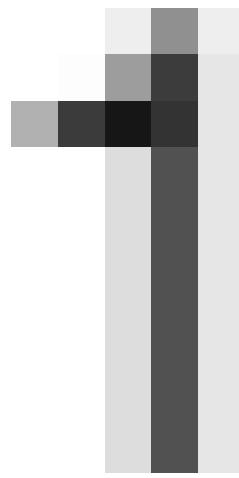

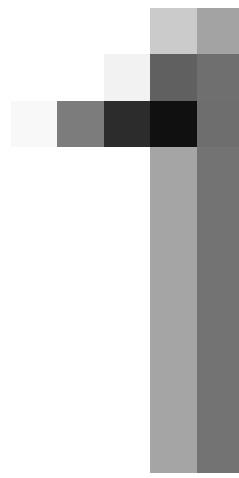

CB<sub>1</sub> & CB<sub>2</sub> receptors

We believe cannabis has the power to heal the world, and our evidence goes back to the dawn of civilization.

The first recorded medicinal use dates back to roughly 4000 B.C., when China's first emperors began recommending cannabis and ginseng as mainstays of herbal medicine. From that point onward, the plant and word of its famed healing powers spread throughout Asia and into Europe.

The reason for the seemingly endless benefits of cannabis lies inside of us. Every animal has a little-known network of receptors and compounds found in the brain, organs, connective tissues, glands, and immune cells called the ECS (endocannabinoid system). This system is responsible for maintaining the body's equilibrium by regulating things like sleep, pain, appetite, immune function, reproduction, neurogenesis, and stress. The ECS is also what interacts directly with the active ingredients in cannabis, such as cannabinoids (like THC and CBD) and terpenes.

We've made it our mission to harness the power of cannabinoids and the ECS to forge a new path to wellness.

# Our formulas.

**dosist™** has worked with leading cannabis scientists to engineer blends of the active ingredients found in cannabis to deliver targeted health benefits. We isolate the active ingredients and reformulate them so that the compounds are always consistent and the therapeutic benefits are the same. All of our formulas are engineered to deliver the optimal health benefit without the overwhelming effects of THC.

**dosist has six formulas:**

**bliss** - helps you feel just the right amount of good

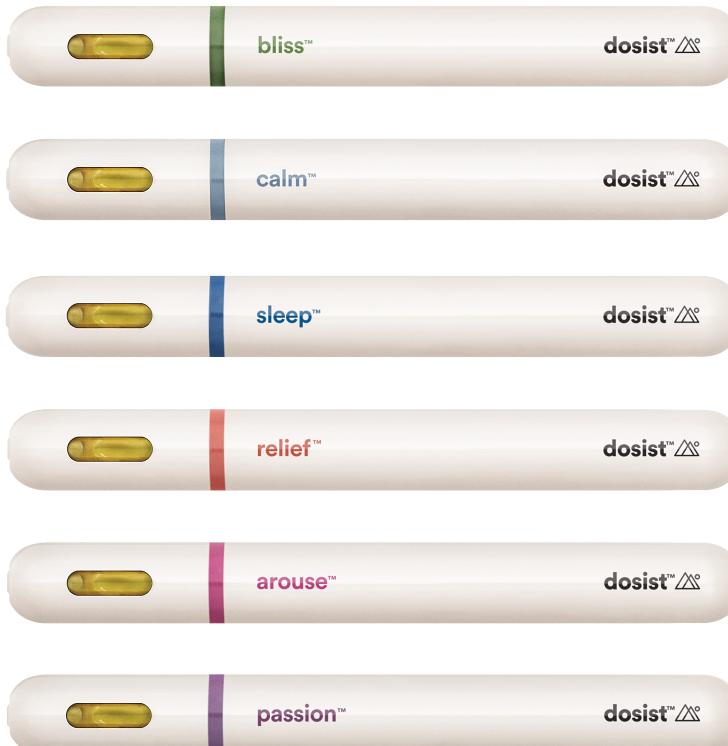

**calm** - relaxes your mind and body

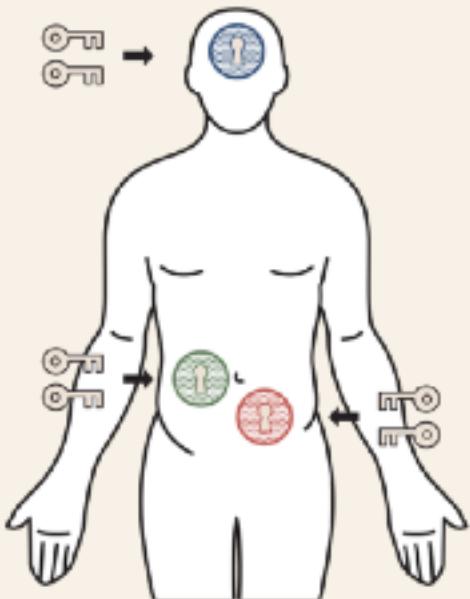

**sleep** - helps you fall and stay asleep

**relief** - eases your pain and inflammation

**arouse** - helps enhance arousal

**passion** - increases your sensuality

### An all-natural lock & key

Think of the ECS as a lock-and-key system inside your body. The lock (internal receptor) is always present, waiting to be unlocked. The two "keys" that can activate the receptor are endocannabinoids and phytocannabinoids.
